## PROFESSIONAL SUMMARY

---

Cloud-native developer and CSE graduate specializing in AWS serverless architectures, mobile application development, and infrastructure as code. Delivered production applications serving real paying clients on AWS, Oracle Cloud, and Cloudflare. Hands-on experience with Lambda, API Gateway, DynamoDB, Terraform, CI/CD pipelines, Supabase, and full-stack mobile development. Proven track record of independently building, deploying, and monetizing cloud-hosted applications from end to end.

## TECHNICAL SKILLS

---

**Cloud Platforms:** AWS (EC2, S3, Lambda, API Gateway, IAM, VPC, CloudWatch, DynamoDB, Cognito, STS, Cost Explorer), Oracle Cloud (ARM Compute, VCN, Autonomous DB), Cloudflare (R2, Workers, CDN, DNS), Microsoft Azure, Firebase, Supabase

**DevOps and Infrastructure:** Docker, Kubernetes, Terraform, CloudFormation, CI/CD, GitHub Actions, Infrastructure as Code, Serverless, Linux, Nginx

**Programming Languages:** JavaScript (ES6+), Python, Java, Dart, Bash

**Backend:** Node.js, Express.js, REST APIs, JWT, OAuth 2.0, AWS SDK

**Frontend and Mobile:** React Native, Flutter, React.js, HTML5, CSS3

**Databases:** MongoDB, DynamoDB, PostgreSQL, MySQL, Firebase Firestore, Oracle Autonomous DB, Supabase, Redis, Cloudflare R2

## EXPERIENCE

---

### Offline Facial Recognition System (Hackathon 7.0)

May 2026 – June 2026

NHAI | Remote Tech: React Native, Edge AI, TensorFlow Lite, AWS

- Developed a fully offline, cross-platform facial recognition and liveness detection system in React Native for integration into the Data lake 3.0 app targeting zero-network field environments
- Engineered a lightweight edge AI model (~20MB) achieving >95% facial recognition accuracy with sub-1-second inference on mid-range Android and iOS devices (Android 8.0+, iOS 12+, 3GB RAM)
- Implemented offline anti-spoofing liveness detection (blink, smile, head-turn) and an offline-to-AWS sync and purge mechanism for post-connectivity data upload using open-source technologies exclusively

### Freelance Cloud and Mobile Developer

April 2025 – Present

Self-Employed | Remote

- Designed and delivered end-to-end cloud-hosted mobile applications for real clients, handling requirements gathering, architecture, development, deployment, and post-launch support
- Built and monetized a live trading platform on Oracle Cloud ARM (4 vCPU, 24GB RAM) with a paid subscription model, demonstrating full product ownership from development to revenue generation
- Developed a two-app grocery platform for a business client consisting of an Owner App for inventory management and a Customer App for product ordering, deployed on Oracle Cloud with real active users
- Built h4help, a mobile app connecting workers with people seeking help for everyday tasks, handling full-stack development and cloud backend deployment
- Delivered automation scripts and cloud infrastructure solutions for multiple clients, reducing manual workload and improving operational efficiency

## PROJECTS

---

### Offline Facial Recognition & Liveness Detection – Hackathon 7.0 | React Native, Edge AI, TensorFlow Lite, AWS

- Built a fully offline cross-platform facial recognition and liveness detection system integrated into the Datalake 3.0 React Native app, enabling secure field personnel authentication in zero-network zones
- Designed a ~20MB lightweight edge AI model with >95% accuracy on diverse Indian demographics, achieving sub-1-second recognition on mid-range devices without GPU dependency
- Implemented anti-spoofing liveness detection (blink, smile, head-turn) and an offline-to-AWS sync and purge mechanism using open-source technologies exclusively

**CloudBurst - AWS Cost Monitoring App** | React Native, Node.js, AWS Serverless

- Architected serverless backend using AWS Lambda, API Gateway, and DynamoDB with Terraform Infrastructure as Code for zero-ops deployment
- Implemented secure multi-account access using JWT and IAM authentication with STS role assumption
- Built real-time cost breakdown visualizations with AI-driven savings recommendations across AWS services

**Live Trading and Market Sentiment App** | React Native, Node.js, Oracle Cloud

- Deployed production trading app on Oracle Cloud ARM (4 vCPU, 24GB RAM) for 24/7 uptime, migrated from AWS EC2 Free Tier for improved cost efficiency and performance
- Integrated Kotak Neo API for zero-brokerage live trading with ML-based trend analysis and custom technical indicators including RSI and MACD
- Monetized via paid subscription model, currently serving active paying clients and demonstrating full product lifecycle ownership

**Grocery Platform - Client Project** | React Native, Node.js, Oracle Cloud

- Built two interconnected mobile apps for a grocery business client: an Owner App for real-time inventory management with over 4K products and a Customer App for browsing and ordering products
- Deployed and hosted backend server on Oracle Cloud ensuring reliable uptime for live business operations with real customers
- Handled complete end-to-end project delivery from client requirements to production deployment as a solo freelance developer

**h4help - Worker Discovery App** | React Native, Firebase, Cloud Backend

- Built a mobile platform to connect individuals with local workers for everyday tasks, managing full-stack development and cloud backend infrastructure
- Implemented location-based worker discovery, user authentication, and real-time job request matching

**Notifier - AI-Powered Smart Notification App** | React Native, AI/ML, Notification Listener

- Built a mobile app that uses an AI model to classify incoming notifications in real-time, distinguishing important messages from routine ones to prevent missed critical alerts
- Implemented a background Notification Listener service to intercept all incoming device notifications and pass message content through an AI classification pipeline
- Integrated custom ringtone logic that plays distinct alert sounds for AI-flagged high-priority messages, ensuring users never miss urgent communications

**EDUCATION**

---

**B.E - Computer Science and Engineering (Cloud Computing Specialization)** 2021 – 2025  
Chandigarh University, Mohali | CGPA: 7.34

**Intermediate (PCM with Biology) - CBSE** 2019 – 2021  
G.M.S.S School Sector 23A, Chandigarh | 70.4%

**Matriculation - CBSE** 2019  
G.M.S.S School Sector 16D, Chandigarh | 68.6%

**CERTIFICATIONS AND RESEARCH**

---

- **Research Paper:** Revolutionizing Supply Chains: An AI Driven Approach to Inventory Management - ICRIET-2025
- **AWS:** AWS Cloud Technical Essentials, AWS Academy Cloud Foundations
- **Oracle:** Oracle Database Management, Oracle Java Development
